Java Method Overriding 2 (Super Keyword)

When a method in a subclass overrides a method in superclass, it is still possible to call the overridden method using **super** keyword. If you write *super.func()* to call the function *func()*, it will call the method that was defined in the superclass.

You are given a code in the editor. Modify exactly 1 line so that the code prints the following text:

> Hello I am a motorcycle, I am a cycle with an engine.
> My ancestor is a cycle who is a vehicle with pedals.

If you lose the original code, click the top left button in the editor and create a new buffer.
